Frequently Asked Questions

Q: Is the metallic effect to both sides of the paper/card?

A: Yes, on the entire range of papers, cards and envelopes.

Q: What does gsm actually mean?

A: Grams Per Square Metre. If a 100gsm bit of paper measured One metre by One metre it would weigh 100 grams. If a 300gsm bit of card measured One metre by One metre, it would weigh 300 grams, hence that's how we get 100gsm, 300gsm and so on.

Q: What weight is best for Order of Service?

A: In general if the item has to stand up and be robust, you need to aim for 220gsm / 250gsm, if it doesn't need to stand up and be as robust, 160gsm would be good.

Q: What in the Curious Metallics range looks most like a gold sheet of paper?

A: Gold Leaf.

Q: What in the Curious Metallics range looks most like a silver sheet of paper?

A: Galvanised.

Q: Will Curious Metallics work through my Inkjet or Laser?

A: You would have to order samples and see the print outs, never exceed your printer's maximum paper thickness.

Thank you for viewing this PDF Guide. If you have any further questions, or need advice on choosing and using Curious Metallics, please contact us or visit our website at www.hitzimaging.com. You can also order Curious Metallics from our website, including samples.
